

Unlock the full value of your cloud platforms through modernisation and optimisation.

Modernisation assessment

2026

Many organisations have migrated systems to the cloud, but are not realising the full commercial, operational or technical benefits available to them.

Applications may have been lifted into the cloud without re-architecting, environments may be running inefficiently, and cloud capabilities such as automation, scalability and resilience may remain underutilised.

Our modernisation assessment helps technology leaders understand the art of what's possible within their existing cloud environments. Through a structured architectural review, we identify opportunities to improve performance, scalability, resilience and cost efficiency while defining a clear path toward modern, cloud-native platforms.

Book your modernisation assessment

Discover how to improve performance, reduce cost and unlock new innovation opportunities in the cloud.

The challenges we help solve

Organisations typically come to us when they face challenges such as:

- Applications migrated to the cloud but not optimised for performance or cost
- Legacy architectures lifted into cloud infrastructure without re-architecting leading to issues with performance
- Increasing cloud costs without corresponding business value
- Performance or resilience challenges in revenue-critical platforms
- Limited automation, DevOps maturity or platform engineering practices
- Cloud capabilities are underutilised across digital platforms

What you will get from the assessment

By the end of the assessment, you will have:

- A clear understanding of the strengths and limitations of your current architecture
- Identified opportunities to improve performance, scalability and resilience
- Insight into cost optimisation opportunities within your cloud environment
- Recommendations for modernisation approaches such as refactoring or re-architecture
- A prioritised roadmap for improving your cloud and application architecture
- Guidance on how to better leverage cloud-native capabilities and automation

How the workshop works
